

## Negative Pressure Wound Therapy System

Model: extriCARE® 2400

Ex  
extriCARE®

# Effective Wound Care

The extriCARE® 2400 pump is a lightweight, portable, battery-powered negative pressure wound therapy pump. Weighing in at approximately 8.6 oz, this pump is lightweight and has an optional carrying case give additional convenience to patients while promoting portability. With airtight, disposable canisters containing a gelling agent that helps solidify the collected wound exudates, the healthcare provider and the patient are both protected from coming in contact with the possible infectious materials from the wound bed.

The pump has the option of either continuous or intermittent vacuum modes allowing the ability to personalize treatment and is used in conjunction with our anatomically fitted line of wound dressings or our foam dressing.

Up to 30 Hours
