

Convenient Post-Operative Care

The Devon32A is a Cold Therapy System that distributes automatic, continuous, and intermittent cold therapy to specific regions of the body through use of compression wraps, providing effective treatment for reducing inflammation and pain, shortening recovery time post-surgery. The Devon32A works together with either shoulder, back, hip, knee, or ankle compression wraps, which are both convenient and easy to fix and release. The LED display shows battery level while the timer records the length of use by the patient. Water repellent isolation pads, quick cooling thermal insulation, and wrap designs based off human anatomy, make the Devon32A the best option for short and long term cold therapy treatment.

Specifications

Display: LED

Cycle Time: 15, 30, 45, or 60 minutes, or OC (non-stop)

Operation Mode: Over 10 hours

Power: AC Adapter, Rechargeable Battery

Weight: 4.8 lbs.

Dimensions: 11" x 7.8" x 8.4"

Voltage: DC12V 1A

Required Power: AC100V~AC240V

Default Pressure: 225 mmHg \pm 25 mmHg

Work Environment: temperature 5~40°C; Relative humidity (RH), not over 85%.
